Seven basic strategies for redesigning the support system

SHIFT Final Workshop
13th January 2016, Brussels
The SHIFT research team
Seven basic strategies for redesigning the support system

- **Put eco-innovators at the centre of support efforts**
  Select specifically eco-innovators for support activities and/or design support activities that fit the specific needs of eco-innovators.

- **Easy entry and sign posting for eco-innovators**
  Create easily accessible entry points to the support system for eco-innovators and provide clear guidance to available support offerings.

- **Encourage experimentation**
  Support systems specifically designed to support eco-innovators is limited, therefore experimentation with innovative support activities and designs should be encouraged.
Seven basic strategies for redesigning the support system

- **Dynamic tailoring of support activities**
  Eco-innovators are not a homogeneous group and therefore support activities for eco-innovators have to be tailored dynamically to the specific needs of specific groups and contexts.

- **Mainstreaming sustainability in the support system**
  Sustainability aspects and requirements are not just an issue for the specific group of sustainable entrepreneurs and therefore sustainability has to be integrated broadly.

- **Specialisation**
  Mainstreaming sustainability should be combined or supplemented by support activities that are specifically targeted at and designed for sustainable entrepreneurs and eco-Innovators.
Seven basic strategies for redesigning the support system

- **Assessment and monitoring of effectiveness**

  Support activities are not an end in itself, and should contribute to specific goals and this requires assessment and monitoring tools that help to benchmark existing support systems, measure impacts and outcomes of support activities and provide data and information for policy makers and decision makers of the support system.
Thanks for your attention!
